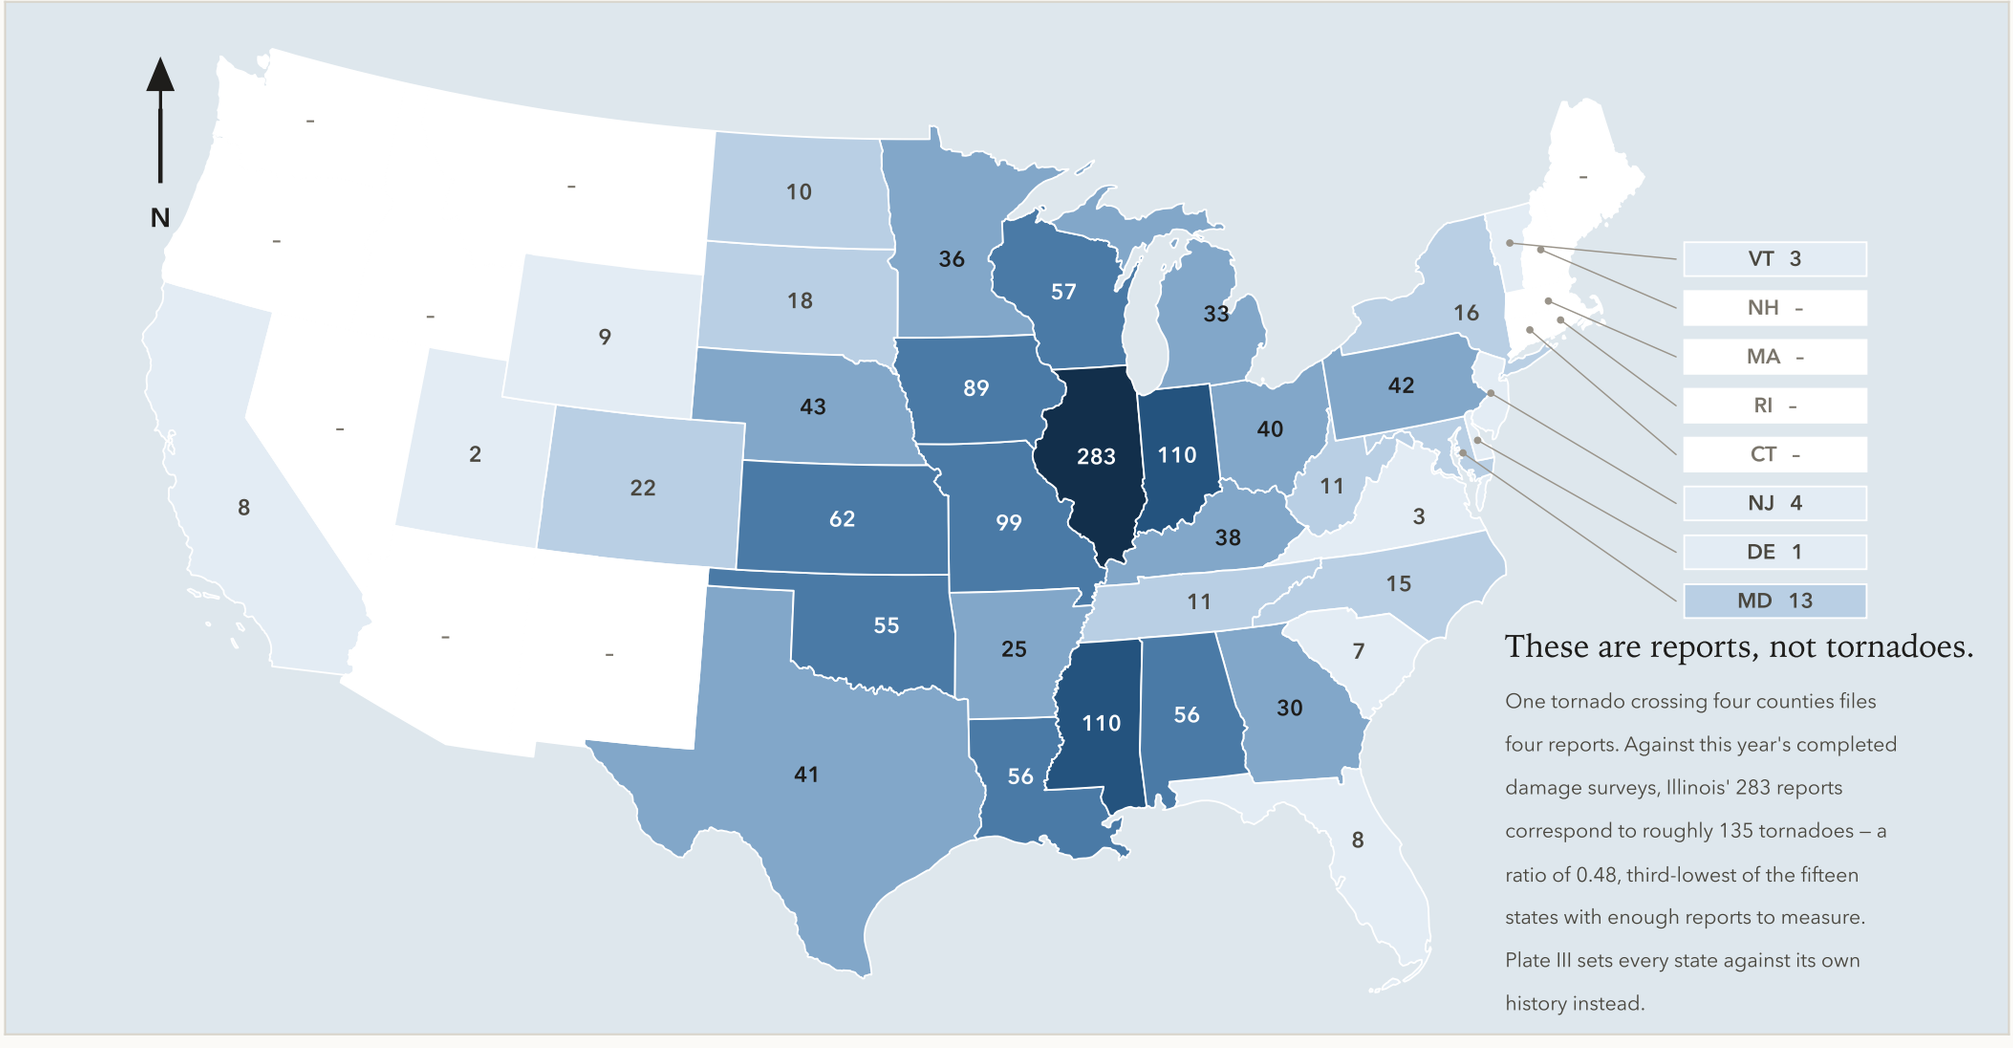

PLATE II

Preliminary tornado reports by state, 2026

National Weather Service Local Storm Reports · 1 January – 13 August 2026

These are reports, not tornadoes.

One tornado crossing four counties files four reports. Against this year's completed damage surveys, Illinois' 283 reports correspond to roughly 135 tornadoes – a ratio of 0.48, third-lowest of the fifteen states with enough reports to measure. Plate III sets every state against its own history instead.

Reports · classes rising by magnitude

none · 1 – 9 · 10 – 24 · 25 – 49 · 50 – 99 · 100 – 199 · 200 or more

Data Iowa Environmental Mesonet, IEM Autoplot #163, preliminary and unfiltered Local Storm Reports, type TORNADO. Retrieved 22 August 2026.

Projection NAD83 / Conus Albers (EPSG:5070), equal area. Boundaries US Census Bureau cartographic boundary file, 2023, 1:20,000,000.

Method Classes rise by magnitude. Figures are counts of reports, not of tornadoes. Local Storm Reports are preliminary and are revised as damage surveys complete. Plate by J. Kenny, 22 August 2026.
